

LT Series Integrated Load Banks

Our new LT series of fully integrated load banks will automatically produce an artificial load as required to allow the diesel generator to continue normal operations during an increase in solar generated power.

Rigorous testing has proven that the integrated load banks have no restrictions or negative effect on the generator performance

www.poweranddrive.com.au

Custom built to suit all makes and models of diesel generators allows this system to be retrofitted to your entire fleet.

FEATURES

- Decrease reverse power protection tripping
- Reduce low loading of the engine
- Broadens operating parameters
- Fully automatic adjustable 3 stage load increase and decrease
- Custom built to suit space and load requirements
- Choice of internal or external design
- Integrated control by new or existing -ComAp IntelliGen / IntelliSys controllers
- Optional 3 stage manual override
- Suits single or multiple set operation
- No functional change to operating procedure as no operator input required
